What are you doing for National Cyber Security Awareness Month?

STOP | THINK | CONNECT

"People are still the weak link, and even intelligent ones make poor decisions."

- Kevin Mitnick (reformed hacker and businessman)

WHAT IS IT?

National Cyber Security Awareness Month (NCSAM), conducted every October since 2004, is an annual awareness-raising effort that seeks to encourage everyone to protect their networks and our nation's critical cyber infrastructure.
www.staysafeonline.org

HOW BAD IS THE PROBLEM?

- "I cannot rule out the potential vulnerability of any system that is connected to the network today. It is widely recognized that the cyber ecosystem that we have today favors the offense and not the defense." Greg Schaffer, Acting Deputy Under Secretary, DHS (NPPD)

- According to Kapersky Lab: On average EVERY PC has 12 vulnerabilities. (August 2011) Hacking tools can be readily downloaded from the Internet and that PC compromised and taken over within minutes.

- According to McAfee: Large-scale cyber warfare operations against the U.S. and other global targets have been well underway for five years in an extensive campaign dubbed "Operation Shady Rat."

- Small business, especially online banking accounts, are now a prime target!!! And, hackers are targeting computer users to get inside networks, obtain access to online banking credentials, and are stealing the most valuable asset of small business: their bank account balance!!!

IS YOUR COMPANY RAISING AWARENESS AMONG YOUR USERS TO LOWER YOUR RISK?

WHAT ARE YOU DOING TO SUPPORT NATIONAL CYBER SECURITY AWARENESS MONTH?

ABOUT NCSAM 2011: THE THEME IS "OUR SHARED RESPONSIBILITY"
